Features

• Visible Light Facial Recognition

• Anti-spoofing algorithm against print attack (laser, color and B/W photos), videos attack and 3D mask attack

• Multiple verification methods: Face / Palm (Customized) / Card / Password

• Available card modules: 125kHz ID card / 13.56MHz IC card / HID card / Felica card

• Supplement light with adjustable brightness

• 1000 face templates capacity, 1000 palm templates capacity (Customized)

2 meters of recognition distance and extra wide angle recognition

The recognition distance has been greatly extended to 2 meters, which significantly improves the maximum traffic rate. While most of the algorithms only support +/-15° of detectable face angle, SpeedFace-V4L doubles the detection angle in terms of head rotation and tilt to +/- 30°.

Touchless palm authentication (Customized) method with a novel hand tracking technique allowing angle tolerance as wide as +/-60° in the roll axis and a recognition distance of 50cm.
